AppStorm

Benchmark the Performance and Functionality of Application Aware Devices and Systems

OVERVIEW

True optimization of application and network performance requires a real-world approach to testing. AppStorm lets users easily validate the performance of application-aware devices and networks at scale using an extensive, pre-defined library of application flows that is continually updated by our dedicated team of protocol experts.

By emulating clients, servers, and real network traffic with a variety of application mixes, you can ensure quality of service of products and quality of experience for customers.

CAPABILITIES

- ✓ Performance benchmark application aware devices and systems: SD-WAN gateways, NextGen Firewalls, IPS/IDS Systems, DPI, and Anti-DDoS readiness
- ✓ Measure the impact of QoS policies on application performance and end-user experience
- ✓ Includes a large and constantly growing library of pre-built application flows for Video Streaming, Social Media, SaaS, E-Commerce, Finance, Gaming, Chat, Web Conference, and many others
- ✓ Supports hundreds of individual application flows for many applications such as, Netflix, Oracle, SAP, Facebook Twitter, Uber, Zoom

FEATURES

- Emulate several thousand end points with unique MAC and IP addresses
- Application library consisting of 1000+ apps
- Monthly application database update
- Apply evasion techniques
- Customizable test reports
- Statistics per application which also include flow direction of the blocked application
- Intuitive web-based UI
- Automate testing with a RESTful API
- Integrates with Netropy network emulators

AppStorm is available on high performance appliances or on virtual machines and can be deployed anywhere. Configure tests with ease on the feature-rich, browser-based GUI or with our comprehensive RESTful API for increased automation. Run multiple tests at once and keep them running in the background, collaborate with your team, and easily connect and perform tests from anywhere.
